Lanka plans Adani projects under govt-to-govt deal

The power ministry cites economic distress among reasons for the move

The Ministry of Power and Energy of Sri Lanka has moved a cabinet-level memorandum to conclude a "government-to-government deal" with Adani Green Energy Limited (AGEL) for the construction of wind power projects awarded to AGEL, according to Lanka’s Cabinet of Ministers. The Ministry informed the Cabinet that the said memorandum was recommended by the Ministry’s technical team and approved by the Ministry’s Cabinet Committee. The Minister of Power and Energy of Sri Lanka also reviewed the content of the draft MoU before the Cabinet.

The Sri Lankan power ministry has also sought help from the government to fund the construction of the 500 MW wind power plants in the northwestern province. The company was informed that the government had at least to fund US$5 million of the project cost to begin construction. While the Sri Lankan power ministry has already cited lack of government funds as the reason for not starting construction of the 300 MW wind power plants in the northwest, it had not made any public statement about US$5 million being required to begin construction.

In June 2022, M M C Ferdinando, the Power and Energy Secretary, had stated that the construction window for the 300 MW wind power projects had ended on June 30, 2022, and the construction of the 500 MW wind power projects would begin in September 2022. Ferdinando had also stated that the Ministry of Power and Energy had already requested the Ministry of Finance to release the US$5 million to fund the construction of the 500 MW wind power projects. However, the Ministry of Finance had not released the US$5 million as of September 2022.

The Ministry of Power and Energy had also cited the need for the construction of the 300 MW wind power projects to be completed by the end of 2023 to meet the country’s energy demands. According to the Ministry, the construction of the 500 MW wind power projects in the northwestern province would be completed by November 2023, while the construction of the 300 MW wind power projects in the northwest would be completed by June 2023.
